

Math Homework Assignment

Algebra Practice

Name: _____

Date: _____

Class/Section: _____

Problem

Solve for x: $2x + 5 = 13$

1.

Simplify: $3(x - 2) + 4x$

2.

Solve: $5y - 3 = 2y + 9$

3.

Factor: $x^2 - 9$

4.

Expand: $(x + 4)(x - 1)$

5.
