Webhook Configuration API Sample Document

This document outlines the usage of the Webhook Configuration API, including request formats, endpoints, and example payloads.

Base URL

```
https://api.example.com/webhooks
```

1. Create Webhook

Creates a new webhook with specified configuration.

```
POST /webhooks
Content-Type: application/json
```

Request Body Example:

```
{
  "url": "https://yourapp.com/webhook",
  "events": ["user.created", "payment.success"],
  "active": true,
  "secret": "abc123"
}
```

Response Example:

```
{
  "id": "wh_12345678",
  "url": "https://yourapp.com/webhook",
  "events": ["user.created", "payment.success"],
  "active": true,
  "created_at": "2024-06-22T10:15:36Z"
}
```

2. List Webhooks

```
GET /webhooks
```

Response Example:

```
[
  {
    "id": "wh_12345678",
    "url": "https://yourapp.com/webhook",
    "events": ["user.created"],
    "active": true
  },
  {
    "id": "wh_87654321",
    "url": "https://another.com/notify",
    "events": ["order.completed"],
    "active": false
  }
]
```

3. Update Webhook

```
PATCH /webhooks/{id}
Content-Type: application/json
```

Request Body Example:

```
{
  "active": false
}
```

4. Delete Webhook

```
DELETE /webhooks/{id}
```

Field Description

Field	Type	Description
id	string	Webhook identifier
url	string	Endpoint to receive webhook payloads
events	array	Subscribed event(s) for webhook
active	boolean	Status of the webhook
