

# Wireless Network Setup Document Sample

## 1. Overview

This document outlines the configuration and setup process for the wireless network. It includes the network requirements, device information, and step-by-step setup instructions.

## 2. Network Information

SSID (Network Name)	_____
Security Type	_____
Password	_____
Router IP Address	_____
Subnet Mask	_____
Gateway	_____
DNS	_____

## 3. Hardware Information

Device	Model/Type	MAC Address	Location
Router	_____	_____	_____
Access Point	_____	_____	_____

## 4. Setup Steps

1. Connect the router to the internet source (e.g., modem).
2. Power on the router and wait for it to initialize.
3. Access the router configuration page at [http://\[Router IP Address\]](http://[Router IP Address]) using a web browser.
4. Log in with admin credentials (default or as provided).
5. Navigate to the Wireless settings section:
  - Set the SSID (network name).
  - Choose the security type and set a strong password.
  - Save changes.
6. Restart the router if required.
7. Connect a device to the wireless network using the configured SSID and password.
8. Test internet connectivity.

## 5. Device Configuration

List all devices connected to the wireless network. Include names, MAC addresses, and static IP (if assigned).

Device Name	MAC Address	Assigned IP
-------------	-------------	-------------

_____	_____	_____
_____	_____	_____

## 6. Notes

- Keep router firmware updated for security improvements.
- Change default admin credentials to prevent unauthorized access.
- Document any configuration changes for future reference.

## 7. Troubleshooting

- Restart the router if devices cannot connect.
- Verify correct SSID and password are being used.
- Check the modem connection if no internet access.
