

Data Export and Import Endpoints Reference

This document provides sample REST API endpoints for exporting and importing data.

Export Endpoints

Endpoint	Method	Description
<code>/api/v1/export/users</code>	GET	Export all user data as a file.
<code>/api/v1/export/orders</code>	GET	Download orders data for backup or migration.
<code>/api/v1/export/products</code>	GET	Export the product catalog in CSV format.

Import Endpoints

Endpoint	Method	Description
<code>/api/v1/import/users</code>	POST	Import users from a provided file (CSV or JSON).
<code>/api/v1/import/orders</code>	POST	Bulk import of order data into the system.
<code>/api/v1/import/products</code>	POST	Upload a product list for import or batch update.

Sample Usage

- **Export All Users:** `GET /api/v1/export/users`
- **Import Orders:** `POST /api/v1/import/orders` (multipart/form-data)

Notes

- Ensure correct authentication/authorization is applied when using these endpoints.
- Import endpoints may expect files in a specific format (see API documentation).
- Responses and error handling will vary depending on implementation.
