

Data Security Compliance Checklist for Medical Software

Access Controls

- Unique user IDs and strong authentication for all users
- Role-based access implemented
- Regular review of privileged accounts

Data Encryption

- Encryption of data at rest
- Encryption of data in transit (e.g., TLS/SSL)
- Storage of encryption keys securely

Audit & Monitoring

- System activity logs are enabled
- Regular review of access logs
- Alerting on suspicious activity

Data Integrity & Backup

- Automated data backups scheduled
- Backup encryption in place
- Regular backup restoration testing

Compliance & Privacy

- Data retention policies documented
- Patient consent management implemented
- Security policies align with HIPAA/GDPR requirements
