

# User Interface Enhancement Release Notes

**Version:** 2.4.0

**Release Date:** 2024-06-12

**Project:** Acme Project Management SaaS

## Summary

This release introduces several significant user interface improvements to enhance usability, navigation, and visual clarity within the platform. The updates include streamlined workspace layouts, improved project overviews, and accessibility enhancements.

## Key Enhancements

### Navigation and Layout

- Redesigned sidebar for faster access to frequently used projects and tasks.
- Collapsible project navigation to optimize screen space on smaller devices.
- Improved responsiveness for tablets and mobile browsers.

### Project Dashboard

- Revamped project overview cards with cleaner information hierarchy.
- Progress bars now display estimated completion based on task weighting.
- Addition of quick filters for status, owner, and deadline.

### Task Management

- Simplified task creation form with contextual auto-suggest for tags and assignees.
- Bulk select and update option now available in task lists.
- New inline editing for task titles and due dates.

### Accessibility & Preferences

- Keyboard navigation improved across all interactive elements.
- Added option for compact view in Settings for dense task lists.
- Accessible labels and tooltips for all action icons.

## Fixed

- Resolved issue with dropdown menus misaligning on Chrome browsers.
- Fixed minor layout glitches in Kanban view for archived projects.
- Corrected tooltip delay on mobile tap events.

## Known Issues

- Calendar widget may briefly flicker on initial load in Safari browsers.
- Task comment threading is under review for improved clarity in next sprint.
